23696 7590 05/22/2007 QUALCOMM INCORPORATED 5775 MOREHOUSE DR. SAN DIEGO, CA 92121			EXAMINER TRAN, TUAN A	
			ART UNIT 2618	PAPER NUMBER
			NOTIFICATION DATE 05/22/2007	DELIVERY MODE ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

us-docketing@qualcomm.com  
kascanla@qualcomm.com  
nanm@qualcomm.com

**Office Action Summary**

Application No.

10/775,971

Applicant(s)

NANDA ET AL.

Examiner

Tuan A. Tran

Art Unit

2618

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 16 April 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1,3-13,15-28,30,31 and 33 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1,3-13,15-28,30-31 and 33 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1, 3-13, 15-28, 30-31 and 33 are rejected under 35 U.S.C. 102(e) as being anticipated by Larsson et al. (2003/0161268).

Regarding claims 1 and 12, Larsson discloses an apparatus and method of scheduling communications, comprising: selecting first and second terminal pairs, the first terminal pair having a first transmitting terminal 5 and a first receiving terminal 4, and the second terminal pair having a second transmitting terminal and a second receiving terminal; scheduling a first signal transmission from the first transmitting terminal 5 to an intermediate terminal 7, the first signal transmission being destined for the first receiving terminal 4, wherein the scheduling of the first signal transmission comprises determining a direct signal transmission from the first transmitting terminal 5 to the first receiving terminal 4 simultaneously with the second signal transmission does not satisfy a target quality parameter for both the first receiving terminal 4 and the second receiving terminal (See page 6 [0096], page 8 [0122] to page 9 [0130]),

simultaneously with the first signal transmission, a second signal transmission from the second transmitting terminal to the second receiving terminal (See fig. 3 and page 6 [0095]); and scheduling a power level for each of the first and second signal transmissions that satisfies a target quality parameter for each of the intermediate terminal and the second receiving terminal (See page 6 [0097], page 7 [0099-0110], page 11 [0166-0170]).

Claims 13, 28 and 31 are rejected for the same reasons as set forth in claims 1 and 12, as apparatus.

Regarding claims 3-7, Larsson discloses as cited in claim 1. Larsson further discloses the determination that the direct signal transmission from the first transmitting terminal 5 to the first receiving terminal 4 simultaneously with the second signal transmission does not satisfy a target quality parameter for the first receiving terminal 4 and the second receiving terminal (See page 6 [0096], page 8 [0122] to page 9 [0130]) comprises attempting to compute a power level for each of the direct signal transmission and the second signal transmission that satisfies the target quality parameter for each of the first receiving terminal 4 and the second receiving terminal (See page 9 [0134-0139], page 11 [0166-0170]) or is a function of distance (See page 9 [0131]) or a function of path loss (See page 7 [0110]) between the first transmitting terminal 5 and the first receiving terminal 4 or the second receiving terminal, wherein the first and second terminal pairs are selected from a piconet of terminals (See fig. 3) and at least a portion of the path loss information is derived from a constructed piconet topology map (See fig. 5).

Claims 15-19 are rejected for the same reasons as set forth in claims 2-7, as apparatus.

Regarding claims 8-9, Larsson discloses as cited in claim 1. Larsson further discloses the steps of: selecting a third terminal pair having a third transmitting terminal and a third receiving terminal; scheduling a third signal transmission therebetween simultaneously with a retransmission of the first signal transmission from the intermediate terminal 7 to the first receiving terminal 4; and scheduling a power level for each of the retransmission of the first signal transmission and the third signal transmission that satisfies a target quality parameter for each of the first receiving terminal 4 and the third receiving terminal (See fig. 3 and page 6 [0095-0096]) and page 11 [0166-0170]).

Claims 20-21 are rejected for the same reasons as set forth in claims 8-9, as apparatus.

Regarding claim 10, Larsson discloses as cited in claim 1. Larsson further discloses the step of scheduling a different spreading code for each of the first and second signal transmissions (See page 7 [0098,0102], page 12 [0176-0177]).

Claims 22, 30 and 33 are rejected for the same reasons as set forth in claim 10, as apparatus.

Regarding claim 11, Larsson discloses as cited in claim 1. Larsson further discloses the parameter comprises a carrier-to-interference ratio (See page 7 [0110]).

Claim 23 is rejected for the same reasons as set forth in claim 11, as apparatus.

Art Unit: 2618

Regarding claims 24-27, Larsson discloses as cited in claim 13. Larsson further discloses the communication terminal comprises: a receiver 122 configured to receive communications from a plurality of terminals and a transmitter 122 configured to transmit communications to the plurality of terminals; the scheduler 113 being communicatively coupled to the receiver and the transmitter; a receiving signal processor 121 configured to de-spread communications between the receiver 122 and the scheduler 113 and a first user interface (display); and a transmitting signal processor 121 configured to spread communications between the scheduler 113 and a second user interface (keypad) and the transmitter 122 (See figs. 3, 14 and page 12 [0176-0177, 0186]).

### ***Response to Arguments***

Applicant's arguments filed 04/16/2007 have been fully considered but they are not persuasive.

The Applicant argued that Larson does not consider simultaneously other communications as claimed in amended claim 1 (See Remark, page 8-9). The Examiner respectfully disagrees with the Applicant's argument. Since Larson does disclose multiple links between a plurality of nodes (communications between nodes) can be established simultaneously (See fig. 3 and page 6 [0095]), wherein the multiple links being established based on determining whether or not each link satisfies the target quality link parameters required for both sending and receiving ends (nodes) (See fig. 4 and page 7 [0113] to page 8 [0116]); therefore, Larson does consider simultaneously other communications as recited in recent amended claims.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan A. Tran whose telephone number is (571) 272-7858. The examiner can normally be reached on Mon-Fri, 10:00AM-6:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Anderson can be reached on (571) 272-4177. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
